Superior Li-ion storage performance of graphene decorated NiO nanowalls on Ni as anode for lithium ion batteries

Xuelin Chen, Ting Xiao, Shulin Wang, Jin Li, Peng Xiang, Lihua Jiang, Xinyu Tan

PII: S0254-0584(18)30821-6

DOI: [10.1016/j.matchemphys.2018.09.061](https://doi.org/10.1016/j.matchemphys.2018.09.061)

Reference: MAC 20990

To appear in: *Materials Chemistry and Physics*

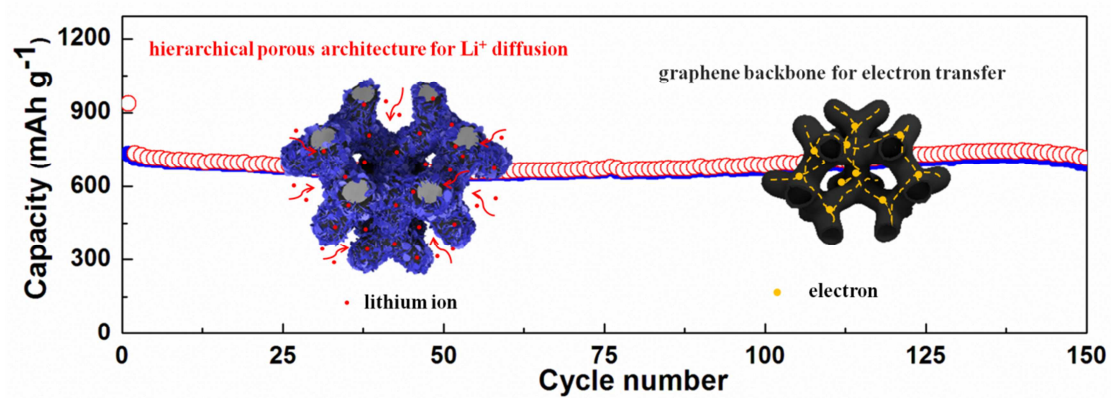

Received Date: 22 July 2018

Revised Date: 9 September 2018

Accepted Date: 17 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Superior cycle stability of NiO-G-Ni is triggered via fast reaction kinetics stemming from hierarchical porous architecture and electric graphene backbone.
