Phospholipid multilamellar vesicles entrapping phenothiazine photosensitizers. Preparation, characterization and evaluation of their photodynamic properties

Jimena Vara, Julieta M. Sanchez, María A. Perillo, Cristina S. Ortiz

PII: S0167-7322(18)33465-2
DOI: doi:[10.1016/j.molliq.2018.10.009](https://doi.org/10.1016/j.molliq.2018.10.009)
Reference: MOLLIQ 9754
To appear in: *Journal of Molecular Liquids*
Received date: 5 July 2018
Revised date: 26 September 2018
Accepted date: 2 October 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Phospholipid multilamellar vesicles entrapping phenothiazine photosensitizers. Preparation, characterization and evaluation of their photodynamic properties.

HIGHLIGHTS

- Azure B and its monobrominated derivative were encapsulated in multilamellar liposomes
- Liposome encapsulation decreased the aggregation of phenothiazine dyes
- Encapsulated photosensitizers exhibited higher singlet oxygen quantum yield
