This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

An Acyclic Eneidyne Anticancer Compound Attributed to a Bergman Cyclization at Physiological Temperature

Baojun Li^a, Bing Duan^b, Jing Li^a, Mengsi Zhang^a, Yuan Yuan^b, Yun Ding^{a*} and Aiguo Hu^{a*}

An acyclic eneidyne functions possibly through spontaneous Bergman cyclization to induce DNA cleavage, inhibit cancer cell growth, and lead cancer cells to apoptosis pathway.
