This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A real-world variant of PRP with perishable inventory is introduced.
- Main inventory management policies are discussed and classified.
- Three families of valid inequalities are used to tighten the MILP problem.
- Compare 8 suboptimal delivery and selling priority policies with an optimized policy.
- Case study shows the applicability of the model and algorithms.
