This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- All modes model is proposed to analyze the ejector performance.
- The non-uniform distribution of the flow field is considered.
- Influences of component efficiencies on the ejector performance are discussed.
- Experimental results are used to validate the effectiveness of the model.
