This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Drug candidates choice from a vendor database recast as portfolio selection problem
- Three alternative formulations are introduced and tested on three molecules datasets
- Expected return of molecule is related to its activity, price and potential gain
- Risk of not finding a drug is associated with diversity of the portfolio
- Exact and approximate methods for multiobjective portfolio optimization are evaluated
