ABSTRACT: Polymeric microspheres from polylactide and infusion of *Woodfordia fruticosa* flower were prepared using emulsion-solvent evaporation method. The obtained microspheres were spherical to oval in shape with the size ranging from 1-29.8 μM with WFPM-2 yielding the major population within a range of 1–6 μm .

Keywords: Polymeric microspheres, *Woodfordia fruticosa*, Poly-lactide, Solvent evaporation
