In-situ nitrogen-doped hierarchical porous hollow carbon spheres anchored with iridium nanoparticles as efficient cathode catalysts for reversible lithium-oxygen batteries

Junrong Shen, Haitao Wu, Wang Sun, Jinshuo Qiao, Huiqun Cai, Zhenhua Wang, Kening Sun

PII: S1385-8947(18)31979-X
DOI: <https://doi.org/10.1016/j.cej.2018.10.038>
Reference: CEJ 20101

To appear in: *Chemical Engineering Journal*

Received Date: 10 July 2018
Revised Date: 1 October 2018
Accepted Date: 6 October 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

In-situ nitrogen-doped hierarchical porous hollow carbon spheres anchored with iridium nanoparticles as efficient cathode catalysts for reversible lithium-oxygen batteries
