This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The existent models of wound healing angiogenesis do not fully described the process.
- Several advantages and disadvantages of current angiogenesis models are reviewed.
- Computational models may reduce the use of expensive and time-consuming methodologies.
- Upcoming models should include vascular network remodelling and ECM components.
