Self-sustaining Positive Feedback Loops in Discrete and Continuous Systems

Jordan C. Rozum, Réka Albert

PII: S0022-5193(18)30453-3
DOI: <https://doi.org/10.1016/j.jtbi.2018.09.017>
Reference: YJTBI 9626

To appear in: *Journal of Theoretical Biology*

Received date: 5 May 2018
Revised date: 19 August 2018
Accepted date: 17 September 2018

Please cite this article as: Jordan C. Rozum, Réka Albert, Self-sustaining Positive Feedback Loops in Discrete and Continuous Systems, *Journal of Theoretical Biology* (2018), doi: <https://doi.org/10.1016/j.jtbi.2018.09.017>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Positive feedback in regulatory circuits can trap system in control-robust behavior
- Analysis of ODE models is informed by analogies with Boolean systems
- Subsystem behavior can place bounds on the effectiveness of system interventions
