This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

11 **HIGHLIGHTS**

- 12 ● Gaseous and particulate amines were detected simultaneously at a remote mountain site in
13 southern China.
- 14 ● Amines were mostly likely in the form of aminium nitrate.
- 15 ● Approximately 7.4% of the total gaseous amines partitioned into the particulate phase.
- 16 ● Direct dissolution was a crucial step for gas-to-particle partitioning under high relative
17 humidity circumstances.
