This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Past research shows that cognitive functioning and depressive symptoms within an individual are reciprocally influential. The present study extends this to couples.
- Lower cognitive functioning is associated with greater depressive symptoms within individuals over time.
- Having a spouse who is depressed may increase one's risk of cognitive decline.
- As shown in previous work, greater depressive symptoms in one spouse predicts greater depressive symptoms in the other over time.
