This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- There has been little research on whether experiencing hunger in childhood is linked to mental health in older adults.
- The experience of childhood hunger was common in Estonian adults aged 60 and above
- In a multivariate logistic regression analysis experiencing childhood hunger sometimes was associated with higher odds for reporting thoughts of death or suicide in older adults
