This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Analytical models considering nodal complexity were established.
- Compressive properties of hierarchical materials were found not determined by relative density.
- Collapse mechanism map was constructed for hierarchical octet-truss materials.
- The upper and lower bounds of strength for the hierarchical materials were deduced.
