To appear in: *Computers and Operations Research*

Received date: 11 December 2016
Revised date: 6 September 2018
Accepted date: 8 September 2018

Please cite this article as: Okan Örsan Özener, Ali Ekici, Elvin Çoban, Improving Blood Products Supply Through Donation Tailoring, *Computers and Operations Research* (2018), doi: <https://doi.org/10.1016/j.cor.2018.09.003>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Multicomponent apheresis allows tailoring the donations based on the need
- Proposed approaches provide donation schedules better than the current practice
- Multicomponent apheresis is advantageous especially when the donor pool is limited
