This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Convolution networks can predict bankruptcy by inputting financial ratios as an image
- Predictive accuracy improves with correlated financial ratios placed in the vicinity
- Deeper network configuration improves predictive accuracy
- Creating artificial financial data does not ensure the same effect as using real data
- Convolution-network-based bankruptcy prediction outperforms traditional methods
