This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Air travel has long been a decisional dilemma to many breast cancer patients, some even totally avoided air travel due to fear of complications (such as wound, drain, thromboembolism, breast implant problem and lymphedema). As such, we have decided to review the best evidence from the literature in this area.

This is a comprehensive review of the existing literature on travel health issues in post-breast cancer surgery patients. The systematic review was performed following strict PRISMA guidelines. This manuscript has never been submitted elsewhere. Please kindly consider our paper for Publication on your esteemed journal "Clinical Breast Cancer". Thank you very much.

Best regards,

Michael Co
