This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A new HIV latent infection model with two time delays is introduced.
- Numerical simulations are provided to support the theoretical analyses.
- The basic reproduction number is obtained.
- Our results show that the size of the delay can affect the infected equilibrium leading to a Hopf bifurcation.
