This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A sample of poor and rich individuals played the CCT task.
- The poor risked overall the same as rich individuals.
- The poor and the rich were equally sensitive to changes in the gain amount.
- The poor, but not the rich, were insensitive to changes in the loss amount.
- The poor were less sensitive to changes in the probability of losing.
