This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Experience of childhood adversity is widespread in the general population;
- Most childhood experiences exist in an interconnected structure;
- Family violence-related adversities and maltreatment are core experiences;
- Women were more affected by early parental death and neglect than men;
- Men were more affected by parental divorce and mental illness than women.
