This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Analyzed relations between symptoms of social anxiety and depression
- Utilized network analyses to determine direct symptom level relations
- Identified the role of various symptoms in the symptom network
- Moodiness appeared to play a central role in the network
- Suggests this symptom may form a bridge between the two disorders
