This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Novel cytomegalovirus-inhibitory compounds of the
class pyrrolopyridines show a complex pattern of
target binding that suggests an unusual mechanism of
antiviral activity**
