Highlights

- Five different hypocrealean species causing fungal pneumonia in seven different reptile species.
- Description of *M. robertsii* and *P. lavendulum* as cause of fungal pneumonia in reptiles.
- TEF phylogeny of *M. granulomatis* and *M. viride* for the first time.
- Differences of the infection route between clavicipitaceous and non-clavicipitaceous pathogens
- Antifungal susceptibility testing of hypocrealean isolates.
