This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Particle size distribution of the dairy rations, grass and maize silages being fed on UK dairy herds are considerably different from North American rations.
- There are a substantial number of UK dairy herds who have either poor diet mixing, or evidence of diet selection, although reasons for these differences are unclear.
