This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Automatic milking with outdoor time restricted to mornings and evenings was used.
- Outdoor management systems with exercise vs. production pasture were compared.
- Milk yield was maintained at a similar high level in both treatments.
- Milking frequency was higher for animals with an exercise paddock.
- Time spent outdoors was higher for animals with a production pasture.
