Influence of bearing ovalization in the dynamic of a planar slider-crank mechanism

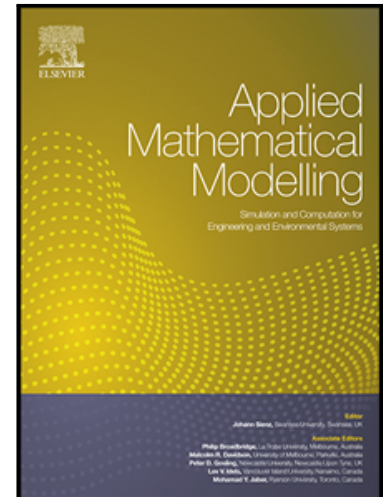

André Rodrigues Garcia da Silveira , Gregory Bregion Daniel

PII: S0307-904X(18)30450-5
DOI: <https://doi.org/10.1016/j.apm.2018.09.008>
Reference: APM 12460

To appear in: *Applied Mathematical Modelling*

Received date: 13 March 2018
Revised date: 29 August 2018
Accepted date: 6 September 2018

Please cite this article as: André Rodrigues Garcia da Silveira , Gregory Bregion Daniel , Influence of bearing ovalization in the dynamic of a planar slider-crank mechanism, *Applied Mathematical Modelling* (2018), doi: <https://doi.org/10.1016/j.apm.2018.09.008>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Bearing ovalization may be beneficial to planar slider-crank mechanism operation
- Ellipticity angle is a key factor to determine the mechanism's dynamic behavior
- Mechanism's macro behavior is not affected by bearing geometry changes
