This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Crosslinked polybenzoxazine coatings with hierarchical surface structures from a biomimicking process exhibiting high robustness and anticorrosion performance**

*Susan Zachariah, Tsai-Wei Chuo, and Ying-Ling Liu\**

Department of Chemical Engineering, National Tsing Hua University, #101, Sec. 2, Kuang-Fu Road, Hsinchu 30013, Taiwan.

**Highlights**

1. Crosslinked polybenzoxazine coatings with hierarchical surface structures are prepared.
2. Biomimicking processes are performed using lotus leaves and xanthosoma sagittifolium leaves based templates.
3. A robust and highly efficient single-component anticorrosion coating is demonstrated with polybenzoxazine.
4. The anticorrosion coating shows an extremely high protection efficiency of 99.93%.
