This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

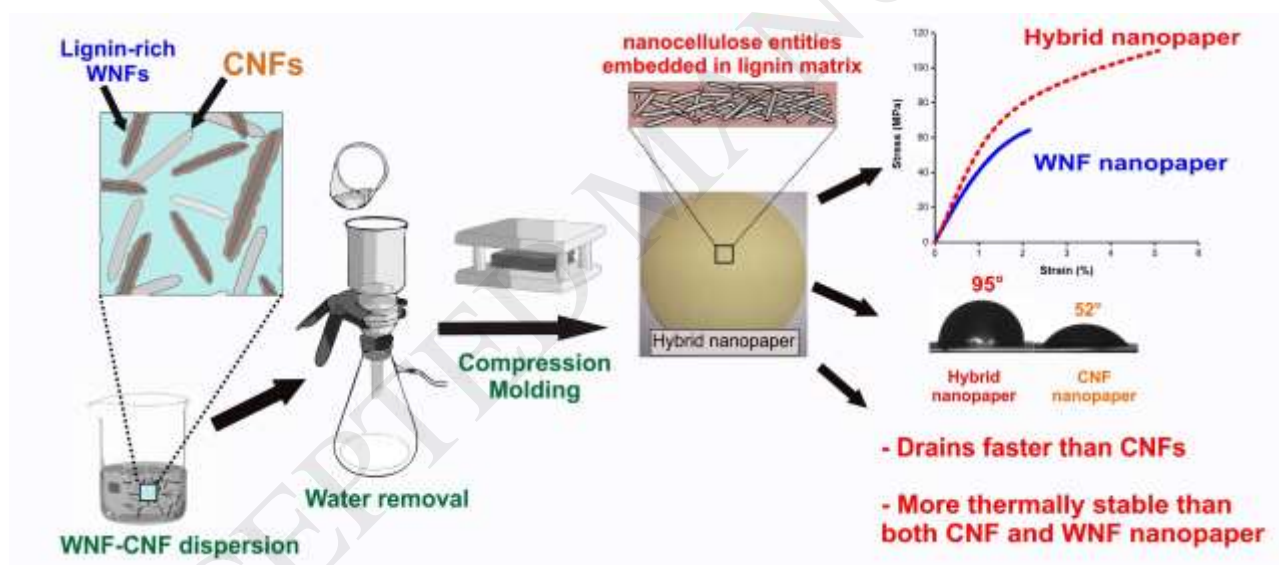

A fast method to prepare mechanically strong and water resistant lignocellulosic nanopapers

Jatin Sethi¹, Miikka Visanko¹, Monika Österberg², and Juho Antti Sirviö^{1*}

Graphical abstract

Highlights

1. Hybrid nanopapers (HNP) were prepared from cellulose nanofibers & wood nanofibers
2. Use of two different nanofibers had synergetic effect on properties of HNP
