Estimate of gas transfer velocity in the presence of emergent vegetation using argon as a tracer: implications for whole-system denitrification measurements

Elisa Soana, Elisa Anna Fano, Giuseppe Castaldelli

PII: S0045-6535(18)31734-X

DOI: 10.1016/j.chemosphere.2018.09.079

Reference: CHEM 22159

To appear in: *Chemosphere*

Received Date: 19 February 2018

Accepted Date: 15 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 **Estimate of gas transfer velocity in the presence of emergent**
2 **vegetation using argon as a tracer:**
3 **implications for whole-system denitrification measurements**
