Highlights

- **C**ondyloma acuminata and lichen planus are different cutaneous diseases with disparate etiologies. Simultaneous appearance of two diseases in the same area is rare. This report aims to share the clinical and pathological features of a rare case; introduce the effective and safe therapy of it so as to broaden the therapeutic spectrum of Photodynamic Therapy (PDT) indications.
- PDT has its therapeutic advantages in cutaneous diseases, especially inflammatory disorders, tissue proliferative diseases such as CA and malignant tumors. Limited side effects and low recurrence are two significant advantages of noninvasive ALA-PDT. This case shows that topical PDT appears to be a viable option for the treatment of CA with LP and adds another application to ALA-PDT.

ABSTRACT

Condyloma acuminata and lichen planus are different cutaneous diseases with disparate etiologies. Simultaneous appearance of two diseases in the same area is rare. This report aims to share the clinical and pathological features of a rare case; introduce the effective and safe therapy of it so as to broaden the therapeutic spectrum of Photodynamic Therapy (PDT) indications.
