Constructing sandwich-like polyaniline/graphene oxide composites with tunable conjugation length toward enhanced microwave absorption

Jia Liu, Yuping Duan, Lulu Song, Xuefeng Zhang

PII: S1566-1199(18)30482-8

DOI: [10.1016/j.orgel.2018.09.017](https://doi.org/10.1016/j.orgel.2018.09.017)

Reference: ORGELE 4883

To appear in: *Organic Electronics*

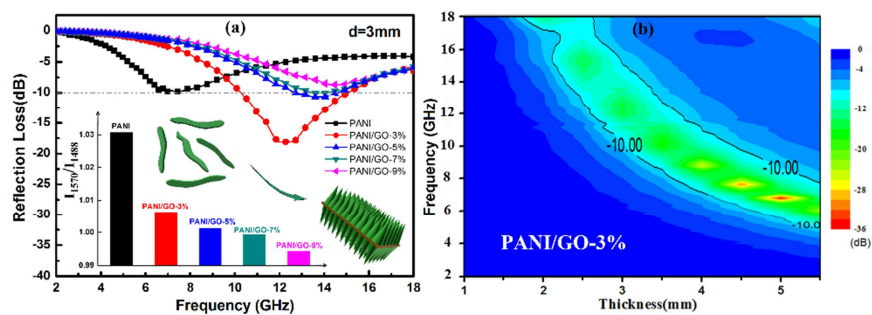

Received Date: 10 July 2018

Revised Date: 11 September 2018

Accepted Date: 11 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

By controlling the content of GO, the average conjugation length of PANI nanorods on GO layers can be modulated, resulting in controllable wave-absorbing properties and various frequency bands.
