Abstract

We show that a model of an advanced small open economy with exports in commodities and search and matching frictions in the labour market can match the impulse responses from a panel vector autoregression to an identified commodity price shock. Using a minimum distance strategy,

^{*}We thank the Co-editor Giancarlo Corsetti and two anonymous referees for their insightful and constructive comments. We are also grateful to seminar and conference participants at the CEF 2016 in Bordeaux, the 2017 MEF Workshop in Madrid, the EEA/ESEM 2016 in Geneva, the 2015 ABFER in Singapore, the Reserve Bank of New Zealand, University of Auckland, Victoria University of Wellington, University of Sheffield, the University of Durham and Heriot Watt University in Edinburgh. We thank Pedro Amaral and Murat Tasci for sharing their data with us, and Junzhu Zhao from the National University of Singapore for providing us with outstanding research assistance. The replication codes for the analysis are available from <http://dx.doi.org/10.17632/ndtmcn5vh.2>.
