This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## **ACCEPTED MANUSCRIPT**

#### Glutathione influence on the photoluminescence from semiconducting single-

#### walled carbon nanotubes compared with other thiol compounds

N.V. Kurnosov, V.S. Leontiev, V.A. Karachevtsev\*

B. Verkin Institute for Low Temperature Physics and Engineering of the National Academy of

Sciences of Ukraine, 47 Nauky ave., 61103 Kharkov, Ukraine

#### Highlights

Glutathione causes increased photoluminescence from nanotubes suspended with DNA.

Nanotube species allow ratiometric photoluminescence detection of glutathione.

Nanotube emission is more sensitive to cysteine addition comparing to glutathione.

Emission enhancement value is larger for thiol compounds with lower redox potential.
