14 **Corresponding author:** sebastian.kreutzer@u-bordeaux-montaigne.fr

15 **Keywords:** IR-RF, ESR, OSL, Médoc, Middle Pleistocene

## 16 **Highlights**

- 17 • Middle Pleistocene chronology for the Médoc section (France)
- 18 • Combined OSL, multiple centre ESR quartz and IR-RF K-feldspar dating
- 19 • IR-RF and multiple centre ESR results show limitations and promises

## 20 **Abstract**

21 A proper understanding of local palaeoenvironmental histories is an iterative process. Previously settled  
22 interpretations suddenly demand a reconsideration triggered by findings from sites not accessible before. The  
23 coastline of the Médoc area in South-West France faced considerable recent erosion, providing new valuable  
24 insights into the history of the local Holocene and Pleistocene deposits; mainly of estuarine, lacustrine and  
25 aeolian origin. In the framework of the project LITAQ for reconstructing the coastal history of the Aquitaine  
26 basin, new recently outcropped sediment profiles have been investigated. To establish the chronological  
27 framework, for the first time optically stimulated luminescence (OSL) on quartz, infrared radiofluorescence  
28 (IR-RF) on K-feldspar were applied in conjunction with multiple-centres electron spin resonance (ESR)  
29 dating on quartz. Our approach combines routine luminescence dating application with methodological  
30 investigations, with a focus on IR-RF and ESR dating. IR-RF and ESR ages are consistently older than the  
31 OSL ages, presumably due to insufficient bleaching, however, they are consistent within 2-sigma. Our study  
32 confirms that the investigated area is covered by Holocene sands, following Pleistocene colluvial and aeolian  
33 sandy deposits mainly deposited in a periglacial context during MIS 8 and MIS 10. The base of the profiles  
34 appears to consist of interglacial estuarine deposits, probably from the Holsteinian (MIS 11), supporting the  
35 theory of a progressive replacement of a tide-influenced marsh by a peaty fresh-water pond during that
