Dynamic model development of enteric methane emission from goats based on energy balance measured in indirect open circuit respiration calorimeter

Carlos Fernández

PII: S2351-9894(18)30207-5

DOI: [10.1016/j.gecco.2018.e00439](https://doi.org/10.1016/j.gecco.2018.e00439)

Article Number: e00439

Reference: GECCO 439

To appear in: *Global Ecology and Conservation*

Received Date: 2 August 2018

Revised Date: 8 September 2018

Accepted Date: 8 September 2018

Please cite this article as: Fernández, C., Dynamic model development of enteric methane emission from goats based on energy balance measured in indirect open circuit respiration calorimeter, *Global Ecology and Conservation* (2018), doi: 10.1016/j.gecco.2018.e00439.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 **Dynamic model development of enteric methane emission from goats**
2 **based on energy balance measured in indirect open circuit**
3 **respiration calorimeter**
