Non-setting, injectable biomaterials containing particulate hydroxyapatite can increase primary stability of bone screws in cancellous bone

Jorge Solana Muñoz, Ulrike Kettenberger, Philip Procter, Dominique P. Pioletti

PII: S0268-0033(18)30130-X
DOI: doi:[10.1016/j.clinbiomech.2018.09.023](https://doi.org/10.1016/j.clinbiomech.2018.09.023)
Reference: JCLB 4612
To appear in: *Clinical Biomechanics*
Received date: 15 February 2018
Accepted date: 21 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Non-setting, injectable biomaterials containing particulate
hydroxyapatite can increase primary stability of bone screws in
cancellous bone**
