## 1. Introduction

Self-destructive behavior - a complex and dangerous phenomenon is widespread today. This behavior is threatening the life, physical or psychological health, normal development of the individual.

Despite the fact that a marked increase in self-destructive behavior among prisoners, however, these displays and methods of diagnosis, despite the urgency, remain scarcely explored. The main factors for this are: closeness of the problem, the complexity of studying the phenomenon of self-aggression, poor training of the criminal corrections system in the identification, diagnosis and prevention of auto-aggressive manifestations, low level of professionalism of the medical units, the weak material and technical base of medical units of correctional institutions, as well as high latency ways self-aggression themselves the subjects. [1].

Convicted for the first time getting to places of detention, fears the unknown, and any information from people who have "unlawful" experience, is for them to determine and, as a rule, this category of prisoners prone to commit the offenses or during transport or getting into quarantine department of correctional institution. A significant portion of the detained or sent to the colony, especially the first

time, do not fear the administration and, of course, not of the insulators or colonies with their cameras, blinds, etc. [2] At this point they do not think much about the upcoming quads. Most of all they are afraid of those who would have to serve his sentence, prison customs and traditions, which often compete successfully with the official rules and regulations. Their fears are not unfounded, as some people are pushed out, expelled from among convicts, they fall to the bottom, and almost always in the most insulting manner. These beatings assault bullying and ridicule, homosexual violence [3].

During the period of adaptation to the isolation of prisoners is especially difficult in the psychological, social and moral sense. Getting into a new specific social environment that sets the unwritten rules for all, often threatens their ignorance of certain penalties, forcing people to take certain maladaptive behaviors.[4] Since the premises person in custody, under which in this case means not only to serve his sentence, but the premise on suspicion of committing a crime in the temporary detention facility (IVS) at the detention center, it begins to affect specific social environment based in unusual circumstances hostel. While staying in the detention of prisoners short-lived, it does not preclude the formation of groups out there negative orientation. Already only under the influence of the medium placed in custody a person automatically can be attributed to the increased risk. [5]

The study features of display self-destruction the inmates is particularly important in the development of psychological support programs in this category. The study is due to the aggressive manifestations of special significance relapse prevention of socially dangerous, aggressive types of offenses.

### 1. Methodology

The results of the study self-destructive behavior of inmates in penal institutions. The leading objective of the study: The study and description of the form self-destructive behavior convicted in the criminal - the institutions.

#### Research objectives:
