This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An EEG-based imagined speech system was assessed for subjects recognition.
- More than one word can be used as a password without decreasing the method performance.
- Impact of instances/channels reduction and feature extraction techniques were studied.
