This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Depending on clustering algorithm used, the results may change.
- Based on Multi-Algorithm Voting, robustness of cluster solutions can be improved.
- OMAV is developed that uses an optimization algorithm as integrative method.
- OMAV is applied to the example of country clustering using GLOBE data.
- Increased robustness and reduced subjectivity are demonstrated.
