Portfolio optimization based on network topology

Yan Li, Xiong-Fei Jiang, Yue Tian, Sai-Ping Li, Bo Zheng

PII: S0378-4371(18)31352-9  
DOI: <https://doi.org/10.1016/j.physa.2018.10.014>  
Reference: PHYSA 20272

To appear in: *Physica A*

Received date: 29 June 2018  
Revised date: 11 September 2018

Please cite this article as: Y. Li, et al., Portfolio optimization based on network topology, *Physica A* (2018), <https://doi.org/10.1016/j.physa.2018.10.014>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

the structure-function relation of a network is of current interest  
dynamic structural features of the core and periphery nodes are investigated  
network peripherality is an indicator for identifying optimal assets  
market mode the noise interference of dynamic networks  
market mode shows significant advantage in portfolio optimization
