## Contents

1. Introduction .....	112
1.1. Scope .....	112
1.2. Overview .....	112
1.2.1. Significance of water and ice .....	112
1.2.2. Typical structural and potential models .....	113
1.2.3. Phonon frequency identities .....	113
1.2.4. Molecular images and orbital energies .....	114
1.2.5. Thermodynamic attributes .....	114
1.2.6. Debye temperature and O:H dissociation energy .....	114
1.3. Challenges and objectives .....	114
2. Principle: O:H—O bond cooperativity .....	114
2.1. O:H—O bond: asymmetrically coupled oscillator pair .....	114
2.1.1. Extension of the Ice Rule: frustration less .....	114
2.1.2. O:H—O bond segmentation: correlation and fluctuation .....	116
2.1.3. Electron localization and dual polarization .....	116
2.1.4. Asymmetric short-range potentials .....	117
2.1.5. Forces driving O:H—O bond relaxation .....	118
2.2. O:H—O bond segmental disparity .....	119
2.2.1. Mechanical strength disparity .....	119
2.2.2. Undercoordination-discriminated O:H—O relaxation .....	119
2.2.3. Specific-heat disparity and extreme-density dispersivity .....	120
2.2.4. Verification of O:H—O bond cooperative relaxation .....	121
3. Analysis strategies, properties versus bonding identities .....	121
3.1. Quantum computations .....	121
3.2. Phonon and electron spectrometrics .....	122

3.3.	Skin viscosity and surface tension.....	122
3.4.	Potential mapping and thermal transport dynamics.....	122
3.5.	Detectable properties versus bonding identities.....	123
3.5.1.	$E_{\text{H}}-d_{\text{H}}-\Delta E_{1\text{s}}$ correlation.....	123
3.5.2.	Elasticity- $\omega_{\text{x}}-\Delta E_{1\text{s}}$ correlation.....	123
3.5.3.	Critical temperatures versus bond energies.....	124
3.6.	Summary.....	124
4.	Compression: proton centralization and ice regelation.....	124
4.1.	Mysteries of compressed water ice.....	124
4.1.1.	Regelation and low compressibility.....	124
4.1.2.	Proton centralization.....	124
4.1.3.	Phonon cooperative relaxation.....	125
4.2.	Bond-phonon-energy relaxation.....	125
4.2.1.	Proton centralization and $d_{\text{x}}$ cooperative relaxation.....	125
4.2.2.	Phonon stiffness cooperative relaxation.....	125
4.2.3.	Band gap expansion.....	126
4.3.	$E_{\text{H}}$ dominance of $T_{\text{c}}$ and $T_{\text{m}}$ .....	126
4.4.	Regelation: O:H–O recoverability and quasi-solid phase boundary dispersion.....	127
4.5.	Summary.....	128
5.	Molecular undercoordination: supersolidity and slipperiness of ice.....	128
5.1.	Puzzles due to molecular undercoordination.....	128
5.1.1.	Skin hydrophobicity, lubricity and thermal stability.....	128
5.1.2.	Electron $\Delta E_{1\text{s}}$ versus phonon $\Delta\omega_{\text{H}}$ .....	128
5.1.3.	Density loss by $d_{\text{O-O}}$ elongation.....	129
5.1.4.	Does a liquid skin cover ice or a solid skin form on water?.....	130
5.2.	Skin bond–electron–phonon attributes.....	130
5.2.1.	Bond relaxation of $(\text{H}_2\text{O})_N$ clusters.....	130
5.2.2.	Skin mass density.....	131
5.2.3.	Cluster-size-dependence of $\Delta\omega_{\text{x}}$ .....	131
5.2.4.	Identical $\omega_{\text{H}}$ for the skins of water and ice.....	131
5.2.5.	Skin electron entrapment versus H–O bond energy.....	133
5.3.	Skin thermo–mechano–dynamics.....	133
5.3.1.	Melting point elevation.....	133
5.3.2.	Curvature-enhanced thermal stability.....	133
5.3.3.	Viscoelasticity, repulsion, and hydrophobicity.....	134
5.4.	Skin supersolidity slipperizing ice and toughening water skin.....	134
5.5.	Summary.....	135
6.	Thermal excitation: ice floating, mass-density and phonon-frequency oscillation.....	135
6.1.	Thermal anomalies of water ice.....	135
6.1.1.	Density oscillation in the full temperature range.....	135
6.1.2.	Available mechanisms for density anomalies.....	135
6.1.3.	Phonon stiffness oscillation and O 1s thermal entrapment.....	136
6.1.4.	Emerging challenges.....	137
6.2.	Bond–electron–phonon relaxation.....	137
6.2.1.	Bond angle–length relaxation and density oscillation.....	137
6.2.2.	Phonon frequency $\omega_{\text{x}}$ thermal oscillation.....	138
6.2.3.	O 1s energy shifting versus $\omega_{\text{H}}$ stiffening.....	140
6.3.	Isotope effect on $\omega_{\text{x}}$ thermal relaxation.....	140
6.4.	Summary.....	140
7.	Multiple fields coupling.....	140
7.1.	Undercoordination enhances the effect of liquid and solid heating.....	140
7.2.	Compression has an opposite effect to undercoordination.....	141
7.3.	Size dispersivity of extreme-density temperatures.....	141
8.	Potential paths for the O:H–O bond at relaxation.....	141
8.1.	Lagrangian oscillating dynamics.....	141
8.1.1.	Harmonic approximation of the coupled oscillator.....	141
8.1.2.	General solution.....	142
8.2.	Specific solutions.....	143
8.2.1.	Short-range interactions at equilibrium.....	143
8.2.2.	Force constants versus vibration frequencies.....	143
8.2.3.	Pressure-dependent $(d_{\text{x}}, \omega_{\text{x}})$ and $(k_{\text{x}}, E_{\text{x}})$ .....	143
8.3.	Potential paths for O:H–O bond relaxation.....	145
8.3.1.	Proton centralization of compressed and cooled ice.....	145
8.3.2.	Molecular undercoordination.....	145
8.4.	Summary.....	145
9.	Uniqueness of the structural solution.....	146
9.1.	Challenge: geometric and scale uncertainties.....	146
9.2.	Density–geometry–length scale correlation.....	146
9.3.	Uniqueness of structure solution.....	146
9.4.	Nanobubble and nanodroplet bi-phase configuration.....	147
