Highlights

- A typology analysis of 32 smart city assessment schemes is provided.
- Smart city assessment is a nascent, but rapidly growing area of research and practice.
- Selected schemes rely on a diverse range of methods for smart city assessment.
- More attention to toolkits that integrate real-time data into the assessment practice is needed.
- Assessment schemes have been practiced in many cities around the globe.

Abstract

There has been a surge of interest over the past several years in the development and implementation of *tools, frameworks, and indicator sets* (hereafter, ‘schemes’) for smart city assessment. Despite this, there has been little examination of the typology and structure of assessment schemes. This gap has been partially addressed in a recent study by Sharifi (2019) that examines strengths and weaknesses
