

Wrinkling pattern evolution on curved surfaces

Yan Zhao , Hanlin Zhu , Chao Jiang , Yanping Cao ,
Xi-Qiao Feng

PII: S0022-5096(19)30335-7
DOI: <https://doi.org/10.1016/j.jmps.2019.103798>
Reference: MPS 103798

To appear in: *Journal of the Mechanics and Physics of Solids*

Received date: 18 April 2019
Revised date: 15 October 2019
Accepted date: 19 November 2019

Please cite this article as: Yan Zhao , Hanlin Zhu , Chao Jiang , Yanping Cao , Xi-Qiao Feng , Wrinkling pattern evolution on curved surfaces, *Journal of the Mechanics and Physics of Solids* (2019), doi: <https://doi.org/10.1016/j.jmps.2019.103798>

This is a PDF file of an article that has undergone enhancements after acceptance, such as the addition of a cover page and metadata, and formatting for readability, but it is not yet the definitive version of record. This version will undergo additional copyediting, typesetting and review before it is published in its final form, but we are providing this version to give early visibility of the article. Please note that, during the production process, errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Theoretical analysis was performed to reveal the curvature effect on surface wrinkling of soft materials;
- A Fourier spectral method was developed to track the wrinkling pattern evolution on a curved surface;
- A phase diagram was constructed to quantify the wrinkling pattern selection in bilayer curve systems with curved surfaces;
- Potential use of the method and the results has been demonstrated.
