This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- While breast cancer treatment is targeted more on tumor and patient characteristics, a tailored individual approach with early and late cardiosurveillance is not yet implemented in routine care.
- Newly available cardiac imaging techniques are better suited for the early detection of cardiotoxicity and should be used more often in those patients at highest risk.
- There is an urgent need for a more tailored patient approach to prevent (early) irreversible cardiac damage by cancer treatment.

Cardiovascular surveillance in breast cancer treatment: a more individualized approach is needed

Angela H.E.M. Maas, MD PhD (1), Nelleke Ottevanger, MD PhD (2), Femke Atsma, PhD (3), Maarten J. Cramer, MD PhD (4), Tim Leiner, MD PhD (5), Philip Poortmans, MD PhD (6)
