**Abstract:** Diaper dermatitis in infants is commonly seen by clinicians in both primary care and acute care settings. The condition can cause significant discomfort for infants and distress for their parents and caregivers. *Nursing for Women's Health* convened a group of nursing clinicians who work in a variety of settings to discuss the issues and challenges related to preventing and treating diaper dermatitis in both healthy term newborns and premature newborns. DOI: 10.1111/1751-486X.12233

**Keywords:** diaper candidiasis | diaper dermatitis | diaper rash | newborn skin care
