Funding: The study was partially supported by an unrestricted grant by Novartis, Abbott and Medtronic, Italy. The sponsor of the study was Heart Care Foundation, a non-profit independent institution which is also the owner of the database. Database management and quality control of the data were under the responsibility of the research centre of the Italian Association of Hospital Cardiologists (ANMCO). No fees were provided to either cardiology centres or investigators.

ABSTRACT

Background: In a recent Italian registry (IN-HF Outcome) including 1855 patients with acute heart failure (AHF), we have reviewed the use of inotropes and their prognostic implication on in-hospital and 12-month mortality.

Methods and results: IN-HF Outcome is a prospective, multicenter, observational, study involving 61
