

Guide for Authors

Brain & Development is aimed to promote clinical child neurology and developmental neuroscience. Submissions considered for publication to *Brain & Development* are received on the understanding that the work described has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, without the written consent of the copyright-holder. For information on Ethical guidelines for journal publication see <http://www.elsevier.com/ethicalguidelines>.

Submission of manuscripts

Brain & Development now proceeds totally online via an online submission system. In case you do not have an internet connection, please contact the Editor-in-Chief for alternative instructions. By accessing the online submission via Elsevier Editorial System, <http://ees.elsevier.com/bradev>, you will be guided stepwise through the creation and uploading of the various files. When submitting a manuscript online, authors need to provide an electronic version of their manuscript and any accompanying figures and tables.

The author should select from a list of scientific classifications, which will be used to help the editors select reviewers with appropriate expertise, and an article type for their manuscript. Once the uploading is done, the system automatically generates an electronic (PDF) proof, which is then used for reviewing. All correspondence, including the Editor's decision and request for revisions, will be processed through the system and will reach the corresponding author by e-mail. If you need more details, please refer to "Tutorial for Authors" link under the "Author Information" column at top page of online submission system: <http://ees.elsevier.com/bradev>.

Once a manuscript has successfully been submitted via the online submission system authors may track the status

of their manuscript using the online submission system (details will be provided by e-mail). If your manuscript is accepted by the journal, subsequent tracking facilities are available on Elsevier's Author Gateway, using the unique reference number provided by Elsevier and corresponding author name (details will be provided by e-mail).

Authors may send queries concerning the submission process or journal procedures to the Central Editorial Office: Masashi Mizuguchi, Editor-in-Chief: bradev@childneuro.jp.

For further details on how to submit online, please refer to the online EES Tutorial for authors or contact Elsevier's Author Support Team at authorsupport@elsevier.com.

In general, manuscripts should be prepared according to the guidelines produced by the International Committee of Medical Journal Editors: Uniform Requirements for Manuscripts Submitted to Biomedical Journals. JAMA 1997;269:927-934.

Language

Only English articles will be accepted. Authors whose native language is not English should enlist the help of colleagues who are proficient in scientific English.

Please write your text in clear and grammatical English (American or British usage is accepted, but not a mixture of these) and authors should conform to the general style of the journal and the specific instructions listed below. Authors who require information about language editing and copyediting services pre- and post-submission please visit <http://www.elsevier.com/languagepolishing> for more information. Please note Elsevier neither endorses nor takes responsibility for any products, goods or services offered by outside vendors through our services or in any advertising.

Manuscripts that are written in poor English and/or not properly prepared will be returned to the authors without review, since it is not feasible for the Editors to undertake extensive revision or rewriting of manuscripts submitted.

Ethics

For all manuscripts dealing with experimental work involving human subjects, specify that informed consent was obtained following a full explanation of the procedure(s) undertaken. Patients should be referred to by number; do not use real names, initials or hospital numbers. Also, the design of special scientific research in human diseases or of animal experiments should be approved by the ethical committee of the institution or conform to guidelines on animal care and use currently applied in the country of origin. This must be stated at an appropriate point in the article.

Patient details

Unless you have written permission from the patient (or, where applicable, the next of kin), personal details of patients included in any part of the article and in any supplementary materials (including all illustrations and videos) must be removed before submission. For further information see <http://www.elsevier.com/patientphotographs>.

Conflict of Interest

Based on the detailed enforcement regulation of the guideline for Conflict of Interest's management in conducting clinical research, all authors must indicate whether or not they have a financial relationship with the organization that sponsored the research. (They should also state that they agree to allow the journal to review their data if requested.)

The manuscript must be accompanied by the "Potential Conflict of Interest Report for Authors". This form can be obtained from http://www.elsevier.com/framework_products/promis_misc/BRADEV_PotentialConflictInterestReport2011.pdf.

Please be sure to attach this form along with subsequent submission of your revised manuscript.

Funding Body Agreements and Policies

Elsevier has established agreements and developed policies to allow authors whose articles appear in journals published by Elsevier, to comply with potential manuscript archiving requirements as specified as conditions of their grant awards. To learn more about existing agreements and policies please visit <http://www.elsevier.com/fundingbodies>.

Referee recommendations and negative preference

To help ensure that papers are reviewed by the most suitable referees, authors may provide a list of three potential referees (including names, addresses, fax and e-mail) who do not have conflict of interest in the

research being submitted. The Editors reserve the right to choose different referees from the ones suggested. You may also suggest reviewers you do not want to review your manuscript, but please state your reasons for doing so.

Article Types

Original Articles

These may describe original clinical or laboratory research. The main text of original articles should generally be in the format of: Structured Abstract, Keywords, Introduction, Materials/Subjects, Methods, Results and Discussion. Authors are reminded that articles should be clear and concise and non-standard abbreviations avoided. Please provide approximately 250 words structured abstract and 3–9 keywords separately. Up to 30 references are recommended.

Reviews

Reviews may concern either clinical or laboratory scientific topics. Relatively brief reviews of between 2,500 and 3,000 words are particularly welcome. Longer reviews are acceptable when justified by topic and comprehensiveness. The format of the main text is same above original articles.

Case Reports

A case report should describe a new disease, or confirmation of a rare or new disease; a new insight into pathogenesis, etiology, diagnosis, or treatment; or a new finding associated with a currently known disease. A report of special scientific investigation, even in a single patient, will be regarded as an original article. The length should ordinarily be less than 1,000 words, with no more than a total of 3 tables and figures and 10 references. This can be exceeded only when justified by extensive special studies. The format of the main text of case reports is also same as original articles.

Letters to the Editor

These should be up to 300 words in length, and should be submitted in response to material published in the journal to make small clinical points or to introduce a point of view. They can be accompanied by up to 5 references but no illustrations. Letters do not carry an abstract.

Proceedings of Meetings

Full manuscripts or abstracts of papers presented at scientific meetings shall be considered for publication as Proceedings in the form either of a supplementary volume, a special issue, or as a section in an issue.
