

Index

Note: Page numbers of article titles are in **boldface** type.

A

- Allografts, for alveolar grafting, 348–349
 - soft tissue, for surgical augmentation of soft tissue around dental implants, 398–400
- Alloplast grafts, materials for alveolar grafting, 348–351
- Alveolar bone, genetic and transcriptional control of formation, **283–293**
- Alveolar distraction osteogenesis, for dental implant preparation, **369–385**
 - biology of, 369–370
 - clinical outcomes, 376–382
 - adjunctive techniques to improve, 377–380
 - compared with conventional bone grafting techniques, 376–377
 - complication rates of, 382
 - immediate loading of implants on distracted bone, 377
 - on a previously reconstructed site, 377
 - patient perception and satisfaction after, 380
 - success of implants in distracted bone, 377
 - vertical bone gain, 376
 - devices for, 371
 - indications for, 371–373
 - planning for, 373
 - protocol, 370–371
 - consolidation period, 371
 - distraction period, 371
 - latency period, 370–371
 - osteotomy, 370
 - surgical advice, 373–375
 - consolidation phase, 375
 - distraction phase, 374–375
 - implant placement, 375
 - incision, 373
 - osteotomy and distractor placement, 374
- Alveolar grafting. See Bone grafting, alveolar.
- Alveolar plane, in treatment planning for osteoperiosteal flap, 336–337
- Alveolar projection, in treatment planning for osteoperiosteal flap, 338
- Alveolar reconstruction. See Bone grafting, alveolar.
- Alveolar segment osteotomy, 340–341
- Alveolar split osteotomy, 341–342
- Anterior iliac crest bone grafts, for dental implant reconstruction, 302–304
 - comparison with posterior, 307

- Augmentation, buccal, to limit esthetic problems around dental implants, 400
 - surgical, of soft tissue around dental implants, 395–400
 - combination hard- and soft-tissue grafting, 400
 - free connective grafts, 398
 - free gingival grafts, 396–397
 - pedicle grafts, 395–396
 - soft tissue allografts, 398–400
- Autogenous bone harvesting, for dental implant preparation, **301–316, 317–330**
 - from distant sites, **301–316**
 - from regional sites, **317–330**

B

- Bone defects, types of, 297
- Bone formation, genetic and transcriptional control of, **283–293**
 - developmental origin of alveolar bone, 283–284
 - osteoblastic biology, 284–290
 - regulation of osteoblastic differentiation by secreted molecules, 288–290
 - stem cells, mesenchymal stem cells, and induced pluripotent stem cells, 286
 - transcriptional regulation of osteoblastic differentiation, 286–288
 - remodeling of alveolar bone, 290
- Bone grafting, alveolar, for dental implant preparation, 283–423
 - alveolar distraction osteogenesis, **369–385**
 - biology of, 369–370
 - clinical outcomes, 376–382
 - devices for, 371
 - distraction protocol, 370–371
 - indications for, 371–373
 - planning for, 373
 - surgical advice, 373–375
 - bone materials available for, **347–352**
 - free tissue transfer, **407–418**
 - bone techniques, 412–416
 - radiation and osseointegration, 408–410
 - soft tissue, 410–412
 - genetic and transcriptional control of bone formation, **283–293**
 - harvesting from distant sites, **301–316**
 - anterior iliac crest, 302–304
 - background, 301–302

Bone (*continued*)

- calvarial, 311–313
 - comparative morbidity, 313
 - posterior iliac crest, 304–307
 - tibial, 307–311
 - harvesting from regional sites, **317–330**
 - mandibular coronoid process, 320–321
 - mandibular ramus and body, 318–320
 - mandibular synthesis, 318
 - techniques for reconstruction with, 322–328
 - zygomatic buttress, 321–322
 - osteoperiosteal flaps and local osteotomies, **331–346**
 - alveolar plane, 336–337
 - alveolar projection, 338
 - biologic basis of, 331–332
 - four-week specimen, 333–335
 - immediate postsurgical specimen, 332
 - one-week specimen, 332–333
 - orthoalveolar form, 337–338
 - small segment wound healing, 335–336
 - subpapillary bone morphology, 338
 - treatment planning for, 336
 - types of, 338–343
 - principles of, **295–300**
 - bone healing, 296–297
 - bone matrix, 295–296
 - bone membranes, 295
 - graft containment and fixation, 299–300
 - graft function, 297–299
 - soft tissue management, 297
 - types of bone defects, 297
 - retrieval and analysis of explanted and in situ implants, **419–423**
 - brief history, 419
 - current and future opportunities, 420–423
 - in vitro plus laboratory and human specimens, 419
 - local experience since the 1970s, 419–420
 - soft tissue considerations in implant site development, **387–405**
 - biologic width, 389–390
 - characteristics of soft tissue surrounding implants, 387
 - diagnosis and classification, 392–393
 - implant spacing, 393–395
 - implant-soft tissue interface, 387–388
 - keratinized attached mucosa, 389
 - limiting esthetic problems around implants, 400–402
 - osseous support for, 390
 - papilla around implant restorations, 390–391
 - planning for optimal soft tissue outcomes, 391–392
 - surgical augmentation around implants, 395–400
 - vascular supply of peri-implant mucosa, 388
 - vertical ridge augmentation using titanium mesh, **331–346**
 - background, 353–354
 - experience with, 365–366
 - mesh removal and implant placement, 363–365
 - postoperative care, 362–363
 - technique, 354–362
- Bone materials, for alveolar grafting, **347–352**
- Bone matrix, 295–296
- Bone morphogenetic protein, 347
- Buccal augmentation, to limit esthetic problems around dental implants, 400

C

- Calvarial bone grafts, for dental implant reconstruction, 311–313
- Ceramic-based materials, for alveolar grafting, 349–350
- Connective grafts, free, for surgical augmentation of soft tissue around dental implants, 398

D

- Dental implants, preparation for. *See* Bone grafting.
- Development, bone, genetic and transcriptional control of, **283–293**
 - developmental origin of alveolar bone, 283–284
 - osteoblastic biology, 284–290
 - regulation of osteoblastic differentiation by secreted molecules, 288–290
 - stem cells, mesenchymal stem cells, and induced pluripotent stem cells, 286
 - transcriptional regulation of osteoblastic differentiation, 286–288
 - remodeling of alveolar bone, 290
- Distant sites, bone graft harvesting from, **301–316**
- Distraction. *See* Alveolar distraction.
- Donor site morbidity, in bone graft harvesting from distant sites, 313

E

- Esthetic problems, techniques to limit around dental implants, 400–402
 - buccal augmentation, 400
 - papilla grafting, 400–401
 - provisional restorations, 401–402

F

- Fibroblasts, 296
- Flaps, osteoperiosteal. *See* Osteoperiosteal flaps.
