### ON THE COVER

*In operative specimen, an ulcer with an exposed vessel is shown. See Jung et al on page xxxiv. Optical coherence tomography scans of the normal wall structure of the common bile duct show 3 recognizable layers, with a linear, regular surface and a different homogenous back-scattering of the light. These layers, from the inner to the outer, are (1) epithelium; (2) connective-fibromuscular, and (3) muscular layer. See Mangiavillano et al on page xxx.*
