CLINICAL–ALIMENTARY TRACT ▶ **21**

Aspirin Dose and Duration of Use and Risk of Colorectal Cancer in Men

A. T. Chan, E. L. Giovannucci, J. A. Meyerhardt, E. S. Schernhammer, K. Wu, and C. S. Fuchs

Editorial, page 341.

ON THE COVER

Liver injury leads to activation of effector fibrogenic cells and a wound healing response (top left). The incipient fibrotic lesion is associated not only with functional abnormalities such as portal hypertension and in advanced disease, synthetic dysfunction, but also with architectural changes and tissue stiffness (bottom) that may be measured by (noninvasive) transient elastography performed at the bedside (right). See Rockey et al on page 8.

▶ **29 Aspirin and Folic Acid for the Prevention of Recurrent Colorectal Adenomas**

R. F. A. Logan, M. J. Grainge, V. C. Shepherd, N. C. Armitage, and K. R. Muir on behalf of the ukCAP Trial Group

Editorial, page 341.
